REAR PROTECTION TOW BAR

Made to Protect

Made from thick 4mm steel and coupled with 60.3mm side tubing to provide maximum strength and protection across the back and rear side sills and sides of the tub.

Everything You Need

Built into the bar are rear recovery points, two high lift jack points to allow for the safe and stable application of high lift jacks on either side of the vehicle, as well as provisions for rear parking sensors, an Anderson plug and recessed number plate lights. The kit is finished with a fitting kit, 50mm tow ball and tongue.

Maximum Ratings

The integrated hitch receiver is rated to the maximum of 2500kg, as set by the manufacturer, allowing users to maximise their tow capacity and make the most of their rear bars.
